

# Space Activities in 2017

Jonathan McDowell  
planet4589@gmail.com  
2018 Jan 15 (rev 2)

## Preface

In this paper I present some statistics characterizing astronautical activity in calendar year 2017. In the 2014 edition of this review, I described my methodological approach and some issues of definitional ambiguity; that discussion is not repeated here, and it is assumed that the reader has consulted the earlier document, available at <http://planet4589.org/space/papers/space14.pdf> (This paper may be found as space17.pdf at the same location).

In rev 2, I have adjusted the payload mass figures in Table 5 (see note 2 to that table).

## Orbital Launch Attempts

During 2017 there were 91 orbital launch attempts.

	2009-2013 Average	2014	2015	2016	2017
USA	19.0	24	20	22	30
Russia	30.2	32	26	17	19
China	14.8	16	19	22	18
Europe		11	12	11	11
<i>Japan</i>		4	4	4	0 7
<i>India</i>		4	5	7	0 5
<i>Israel</i>		1	0	1	0 0
<i>N Korea</i>		0	0	1	0 0
<i>S Korea</i>		0	0	0	0 0
<i>Iran</i>		0	1	0	0 1
Other		9	10	13	13
Total	79.0	92	87	85	91

There were two Arianespace-managed Soyuz launches from French Guiana which are counted as European.

## Launch failures

During the year there were 4 orbital launch failures and 2 launch failures which reached orbit, tabulated below. To evaluate average launch vehicle reliability I allocate each launch a score between 0.0 (total failure) and 1.0 (success). Failures which nevertheless reach orbit get an intermediate score;

Table 2: 2017 Orbital Launch Failures

Designation	Date	LV State	LV	Payload	Type of failure	Launch Score
2017-F01	Jan 14	Japan	SS-520	TRICOM-1	Telem loss/RSO destruct	0.00
2017-F02	May 25	US*	Electron	Test payload	Telem loss/RSO destruct	0.00
2017-035	Jun 18	China	CZ-3B	ZX-9A	Stage 3 burn 2 attitude loss	0.40
2017-F03	Jul 2	China	CZ-5	SJ-18	Stage 1 failure	0.00
2017-F04	Jul 27	Iran	Simorgh	Unknown	Stage 2 failure	0.00
2017-051	Aug 31	India	PSLV-XL	IRNSS-1H	Fairing sep failure	0.20
2017-F05	Nov 28	Russia	Soyuz-2-1b	Meteor-M 2-1	Stage 4 wrong trajectory	0.00

Electron is licensed in the USA but launched from New Zealand territory

## Commercial Launches

Of the 91 orbital launch attempts, 39 were carried out by governments; 24 by commercial companies under contract to their host governments, and 28 for commercial customers, including foreign governments.

Table 3: Commercial versus government launches

Launch provider	Launches	Type	Customers
US Launch providers			
ULA/Boeing Delta 4	1	CSP	US Gov
ULA/LM Atlas 5	6	CSP	6 US Gov
ULA/Boeing Delta 2	1	CSP	1 US Gov
SpaceX Falcon 9	18	FCS	6 US Gov, 12 Comm
Orbital Antares	1	FCS	1 US Gov
Orbital Minotaur	2	CSP	1 US Gov, 1 Comm
Rocket Labs Electron	1	FC	1 Comm Test
European Launch providers			
Arianespace Vega	3	FC?	1 Eur gov, 2 comm./foreign
Arianespace Ariane 5	6	FC	1 Eur gov, 5 comm/for.
Arianespace Soyuz	2	FC	2 comm.
Russian Launch providers			
ILS Proton	3	FC	3 commercial
Khrunichev Proton	1	GOV	1 Ru gov
Khrunichev Rokot	1	GOV	1 foreign gov.
S7 Zenit	1	FC	1 commercial
Roskosmos Soyuz	9	GOV	9 Ru.gov (civil)
VVKO Soyuz	4	GOV	4 Ru.gov (military)
Chinese Launch providers

CALT CZ-3A/B/C	5	GOV	Chinese gov
CALT CZ-5	1	GOV	Chinese gov
CALT CZ-6/7	2	GOV	1 Chinese gov, 1 commercial
CALT CZ-11	0	GOV	Chinese gov
CALT CZ-2F	0	GOV	Chinese gov
SBA CZ-2D/4B/4C	5	GOV	4 Chinese gov, 1 commercial
EXPACE KZ-1A	1	CO?	Comm
CASIC KT-2	1	GOV	Chinese gov
Other Launch providers			
MHI H-IIA/B	6	CSP	6 Japan gov
ISAS SS-520	1	GOV	1 Univ. payload
JAXA Epsilon	0	GOV	0 Japan gov
ISRO/Antrix PSLV/GSLV	5	GOV	5 Indian gov
IRSA Simorgh	1	GOV	1 Iranian gov
ISA Shavyt	0	GOV	0 Israeli gov
NADA Kwangmyongsong	0	GOV	0 North Korean gov

*Here GOV = Government; CO = Commercial operation; CM = Commercial manufacture; CSP = Commercial service provision to government; FCS = Fully commercial service (but customers may include govt); FC = Fully commercial (no govt involved); A = Amateur, academic, non-profit. See the 2014 document for full discussion.*

## Satellite Launch Statistics

2013 and 2014 saw a dramatic increase in the numbers of satellites deployed, thanks to the launch of several clusters of cubesats. The record 440 satellites launched in 2017 include 145 with masses above 100 kg.

Failures to reach orbit are not included here. Note that the 2015 figures have been corrected for an earlier error in which satellites then aboard ISS awaiting deployment were omitted in earlier versions of this report.

Table 4: Payloads launched per year						
	2012	2013	2014	2015	2016	2017
USA	35	85	110	112	94	279
Russia	22	29	34	27	15	24
China	25	17	26	44	40	35
Other	50	75	86	53	72	102
Total	132	206	255	236	221	440

Let us break this down by class for 2017 (first the launch powers, then other countries). In 2017 the satellites launched were owned by 43 countries and two European organizations: ESA and the European Union.

## Satellite ownership by country

Table 5: 2017 payloads launched, by owner country and class

	A Academic/ NonProfit	B Business/ Commercial	C Civil	D Defense	Total Number	Total Mass (tonne)
USA	11	243	8	18	280	166
China	4	10	7	14	35	48
Russia	3	0	13	8	24	66
Japan	1	3	5	2	11	25
India	1	0	8	0	9	14
ESA/EU/EUM	0	0	6	0	6	5
AT Austria	1	1	0	0	2	0

GH Ghana	1	0	0	0	1	0
ID Indonesia	0	1	0	0	1	3
IL Israel	2	1	1	0	4	0
(continued)						

Table 5: (continued)

	A Academic/ NonProfit	B Business/ Commercial	C Civil	D Defense	Total Number	Total Mass (tonne)
KP N Korea	0	0	0	0	0	0
KR S Korea	3	2	0	0	5	7
KZ Kazakhstan	1	0	0	0	1	0
LT Lithuania	1	0	0	0	1	0
LV Latvia	0	0	1	0	1	0
MA Morocco	0	0	0	1	1	1
MN Mongolia	1	0	0	0	1	0
MX Mexico	0	0	0	0	0	0
NG Nigeria	1	0	0	0	1	0
PE Peru	0	0	0	0	0	0
PH Phillipines	0	0	0	0	0	0
T Thailand	0	0	0	0	0	0
TR Turkey	2	0	0	0	2	0
TW Taiwan	1	0	1	0	2	1
UA Ukraine	1	0	0	0	1	0
UAE United Arab Em.	0	0	1	0	1	0
UY Uruguay	0	1	0	0	1	0
VE Venezuela	0	0	1	0	1	1
ZA South Africa	2	0	0	0	2	0
Total Other					38	32
Total	63	275	57	45	440	392

Note: Due to the integration of the aerospace industry in the EU and its neighbouring countries, west/central European figures are grouped together.

Note 2: In rev 0 and 1 of this report the mass figures did not take into account separable parts of payloads such as Soyuz propulsion modules or the Dragon trunk. As of rev 2 I have revised the figures to include them; masses of launch vehicle rocket stages are still excluded.

## Satellite manufacture by country

Most countries build only very small (cubesat) satellites, purchasing their larger satellites from one of the main space powers. Here I tabulate the manufacturers of 2017 satellites with masses of 100 kg or more. HSF is 'Human spaceflight', including related robotic missions such as cargo ships to support ISS. 'Surv.' is surveillance, including early warning and space debris surveillance; visible and radar imaging recon satellites and weather sats are under 'Imaging'. Microgravity research and planetary probes are included under Sci (Science). Satellites built in the UK, France, Germany, Italy, Spain and the Netherlands are lumped together as 'Europe' to reflect the integration of the western European aerospace industry.

Table 6: 2017 payloads by manufacturer country - 100 kg and up only									
	HSF	Comms	Imaging	Nav	SIGINT	Surv.	Sci	Tech	Total
USA	6	54	8	0	3	2	0	1	74
China	1	4	5	2	9	0	1	1	23
Europe	0	10	3	4	0	0	0	1	18
Russia	9	2	1	1	1	0	0	0	14
India	0	3	2	1	0	0	0	0	6
Japan	0	1	2	3	0	0	0	1	7
Indonesia	0	0	0	0	0	0	0	0	0
Israel	0	0	2	0	0	0	0	0	2
N Korea	0	0	0	0	0	0	0	0	0
Taiwan	0	0	1	0	0	0	0	0	1

## **Scientific Space Programs**

2017 saw the launch of few major scientific missions; the most significant was Huiyan, the Chinese X-ray astronomy satellite. Also notable was the QB50 project, with a constellation of 2U cubesats to study the upper atmosphere. However, the performance of the QB50 satellites was mixed. Also of note are several small astronomy payloads - CXBN-2 and Max Valier for X-ray astronomy, and ASTERIA for exoplanet studies. It is too early to tell if these small missions will be able to return useful results.

There were no deep space missions launched in 2017.

## **Military Space Activities**

Military satellites include navigation, communications, and technology development missions in addition to the intelligence gathering activities that I report here.

### **Military R&D**

Russia carried out a proximity operations experiment in low orbit with the Kosmos-2519 host satellite and two subsatellites, Kosmos-2521 and Kosmos-2523, which carried out a variety of maneuvers.

The US NRO launched the mysterious USA 276 satellite which is in a very similar orbit to the ISS, and passed within 10 kilometers of it at one point. The mission of the satellite is unclear, and it is thought that the proximity to ISS is probably a coincidence.

The X-37 spaceplane began its 5th flight. It appears to have been placed in a different inclination and has not yet been found by independent observers. There have been reports that it has clandestinely deployed cubesats - if so, they have not been given catalog numbers in the public satellite catalog and have not yet been reported to the United Nations.

### **Space surveillance**

The SBIRS GEO-3 satellite was launched in January to supplement the early warning constellation; it was joined by the HEO-4 elliptical orbit payload in September. The US ORS-5 satellite was launched to an equatorial low Earth orbit, with a mission to look up and monitor the GEO belt.

Russia also launched the second EKS elliptical-orbit early warning satellite, codenamed Kosmos-2518.

### **Reconnaissance and Signals Intelligence**

The USA launched an elliptical orbit sight mission in September, USA 278 (possibly RAVEN 7?). The same satellite carries the HEO-4 early warning sensor. A low orbit Navy INTRUDER sight system was launched in March as USA 274; the system has two maneuvering satellites, one of which is dishonestly cataloged as debris. The US Army Kestrel Eye-IIM small imaging satellite was deployed from ISS after many years of development.

China launched a constellation of nine satellites into a 35 degree low Earth orbit. They are thought to be for signals intelligence, but this not certain. The satellites are called Yaogan 30 Group satellites also given numbers in the Shanghai microsatellite team's Chuanxin-5 series. (for example, Yaogan 30 hao 03 zu 02 xing, i.e. Yaogan 30 Group 3 satellite 2, is Chuanxin-5 satellite 8). There was also a Yaogan 30 satellite launched in 2016 but it appears to be unrelated - possibly the naming is a deliberate attempt at confusion.

Two Chinese imaging satellites were launched in 2017 - LKW 1 and 2 (Land Survey Satellite). They were placed in the same 10:30 local time SSO plane but 180 degrees apart.

Russia deployed the third Lotos-class LEO sigint satellite, Kosmos-2524. The Russian Kanopus-V-IK infrared imaging mission is also thought to support military users.

Japan launched the Radar-5 SAR imaging spy satellite; Italy launched the Optsat-3000 imaging satellite which was built by Israel as part of a bilateral arms deal. Finally, Morocco joined the military space arena with the launch of a French-built spy satellite.

## Orbital Debris and Orbital Decay

At the end of 2017 there were 18411 catalogued objects in orbit and the total known mass in orbit increased to 9013 tonnes. The figures for past years given here are a bit different from previous year's reports thanks to database improvements and tweaks to how deep space objects are handled. Note that the number of active vs dead payloads is highly uncertain, but their sum should be correct.

Table 7: Debris in orbit 2014-2017

	Debris 2014		Debris 2015		Debris 2016		Debris 2017	
	Number	Mass (t)	Number	Mass(t)	Number	Mass(t)	Number	Mass(t)
Active Payloads	1302	1591	1427	1698	1548	1801	1905	1929
Dead Payloads	2523	3385	2543	3486	2572	3600	2607	3717
Rocket bodies	1680	2913	1718	3019	1752	3102	1780	3203
Operational debris	1626	148	1616	155	1620	159	1627	164
PRC ASAT/FY-1C debris	2939	-	2870	-	2849	-	2838	-
Strela/Iridium debris	1595	-	1485	-	1440	-	1420	-
Other fragment debris	5609	-	6226	-	6257	-	6232	-
Spurious catalog entry	1	-	1	-	1	-		
Total catalogued	17275	8038	17886	8360	18039	8663	18411	9013

## Reentries

Table 8 gives statistics on reentries in 2016, not including deliberate deorbit and landing.

Table 8: Uncontrolled Reentries 2017		
	Number	Mass (t)
Active Payloads	20	0.5
Dead Payloads	21	9.7
Rocket bodies	33	64.4
Operational debris	35	3.4
PRC ASAT/FY-1C debris	11	-
Strela/Iridium debris	20	-
Other fragment debris	36	-

## Controlled deorbits and landings

In addition to natural reentries, there were 8 controlled landings and 8 controlled deorbitings of spacecraft during 2017, representing the safe removal of around 0 tonnes from the orbital environment. 4 Russian Soyuz ships landed in Kazakhstan. and three Dragon spacecraft splashed down in the Pacific near California. The OTV Flight 4 spaceplane landed on a runway at Kennedy Space Center.

Six ISS cargo ships (two Cygnus, one HTV and three Progress) were deorbited over the South Pacific east of New Zealand. The Tianzhou-1 frieghter was deorbited, as was the Iridium 74 satellite. (Several other Iridium satellites had their orbits lowered before being switched off, and made uncontrolled reentries after a few weeks).

Eleven objects reentered and burned up on controlled trajectories associated with landings of spacecraft (Soyuz orbital and propulsion modules, Dragon trunks).

In addition, 26 rocket stages were deorbited after only one or two Earth orbits (5 Centaur, 2 Delta, 11 Falcon 9, 3 Vega AVUM, 3 Chinese CZ-2D, a Volga and a Fregat). Only six of these were assigned catalog numbers. A further 18 rocket stages were inserted into slightly suborbital trajectories that ensured controlled disposal without the need for a deorbit burn (Ariane EPC, Vega Z9A, Proton stage 3, PSLV stage 3, some Soyuz-2 stage 3).

## **Debris events**

On Jun 17 the AMC-9 satellite failed and generated debris, either due to a internal failure or a debris impact. Enough control was regained to safely raise the satellite's orbit to the GEO graveyard, but some amount of debris remains in the GEO band.

Telkom-1 suffered a similar failure on Aug 26. It is drifting uncontrolled in the GEO belt.

On Sep 3, a SOZ motor from the Sep 2010 GLONASS launch disintegrated. It is the 48th known SOZ motor disintegration.

## **Retirements in the GEO belt**

During 2017 17 satellites were retired to the graveyard above the GEO. In order of increasing final perigee they are: Kodama, Amos 2, Insat 3C, ABS-3, Intelsat 701, Artemis, Hispasat 84W-1, AMC 9, Zhongxing 20, Kiku 8, Echostar 3, JCSAT 1B, UHF FO6, Echostar 8, Amazonas 1, and Meteosat 7. It appears that Kodama's orbit is somewhat lower than IADC guidelines would require.

In addition, in late 2017 Asiasat 4, Astra 1H, and Afristar are drifting above GEO, but below the graveyard. It is as yet unclear whether they are retired or just relocating.

## **Acknowledgements**

The data presented here are extracted from my satellite and launch database, generated from open source media reports combined with analysis of US Space-Track orbital elements. The analysis has benefited from the opinions of many colleagues, notably Dwayne Day, Brian Weeden, Jeffrey Lewis, Laura Grego, David Wright, Phillip Clark, Rui Barbosa and posters on the forums at nasaspaceflight.com. Thanks to Gil Denis for catching the error in Table 5 in rev 1 of this edition.

The author is an employee of the Smithsonian Institution, but the work reported here was performed independently and does not represent the views of the Smithsonian.
