Rev 1.0 - initial release

Rev 1.1 - Fix typos

Rev 1.2 - Fix Ekspress 80/103 swap

Rev 1.3 - Add question marks to uncertain catalog numbers in Appx 2. Correct CZ-7A failure dat

Rev 1.4 - Added correct figures for Kosmos-2535/2536 separation

## Preface

In this paper I present some statistics characterizing astronomical activity in calendar year 2020. In the 2014 edition of this review, I described my methodological approach and some issues of definitional ambiguity; that discussion is not repeated here, and it is assumed that the reader has consulted the earlier document, available at <https://planet4589.org/space/papers/space14.pdf> (The present work may be found as [space20.pdf](https://planet4589.org/space/space20.pdf) at the same location).

### Special note: GCAT

In 2020 I published the first edition of the General Catalog of Artificial Space Objects (GCAT), with details of orbital and suborbital launches, and of orbital and deep space objects. The catalog is at <https://planet4589.org/space/gcat> and this report is largely based on the data in it.

## 1 Orbital Launch Attempts

### 1.1 Launch statistics by country

During 2020 there were 114 orbital launch attempts from Earth, with 104 reaching orbit. There was one additional orbital launch from the Moon, not included in the table below.

Table 1: : Orbital Launch Attempts

	2009-2013 Average	2014	2015	2016	2017	2018	2019	2020
USA	19.0	24	20	22	29	31	21	37
Russia	30.2	32	26	17	19	17	22	12
China	14.8	16	19	22	18	39	34	39
Europe		11	12	11	11	11	9	10
<i>Japan</i>		4	4	4	7	6	2	4
<i>India</i>		4	5	7	5	7	6	2
<i>Israel</i>		1	0	1	0	0	0	1
<i>N Korea</i>		0	0	1	0	0	0	0
<i>S Korea</i>		0	0	0	0	0	0	0
<i>Iran</i>		0	1	0	1	0	2	2
<i>New Zealand</i>		0	0	0	1	3	6	7
Other		9	10	13	14	16	16	16
Total	79.0	92	87	85	91	114	102	114

The Arianespace-managed Soyuz launches from French Guiana and the Starsem-managed Soyuz launches from Russia are counted as European.

Electron is licensed in the USA but launched from New Zealand territory by the New Zealand subsidiary of the US-headquartered Rocket Lab. I go back and forth on this, but for now I consider Electron to be a New Zealand launch of a US-manufactured rocket.

## 1.2 Launch failures and uncataloged orbital launches

During the year there were 10 orbital launch failures. In general I award partial success scores to launches which reach orbit but do not successfully deploy their payloads in the targeted orbit; there were no such cases in 2020.

Launches that are marginally orbital or fall just short of orbital are given 'U' designations. This year, the Vega failure had a perigee estimated at around -500 km and is given designation 2020-U01.

'U' designations are also given to launches from other worlds; the Chang'e-5 launch from Oceanus Procellarum on the Moon is given the designation 2020-U02.

Table 2: F and U launches in 2020

Table 2 (a): 2020 orbital launch failures and partial failures

Designation	Date	LV State	LV	Payload	Type of failure	Launch Score
2020-F01	Feb 9	Iran	Simorgh	Zafar	Stage 2 underburn?	0.00
2020-F02	Mar 16	China	CZ-7A	XJY-6	Stage 2 failure	0.00
2020-F03	Apr 9	China	CZ-3B	Palapa N1	Stage 3 failure	0.00
2020-F04	May 25	US	Launcher One	INTERNSAT	Stage 1 shutdown	0.00
2020-F05	Jul 4	US/NZ	Electron	CESAT-1B/Flock4e	Stage 2 underburn	0.00
2020-F06	Jul 10	China	KZ-11	Jilin-1 GF02E	Stage 3 failure	0.00
2020-F07	Sep 12	US	Astra Rocket	Rocket 3.1	Stage 1 failure	0.00
2020-F08	Sep 12	China	KZ-1A	Jilin-1 GF02C	Unknown	0.00
2020-U01	Nov 17	Arianespace	Vega	SEOSAT-Ingenio	Stage 4 first burn	0.00
2020-F09	Dec 15	US	Astra Rocket	Rocket 3.2	Stage 2 underburn	0.00

Table 2(b): 2020 additional launch designations

Designation	Date	LV State	LV	Payload	Type of launch	Launch Score
2020-U02	Dec 3	China	CE-5 SSQ	CE-5 SSQ	Lunar launch	1.00

### **1.3 Commercial Launches**

Of the 114 orbital launch attempts: 51 were carried out by governments; 22 by commercial companies under contract to their host governments, and 41 by commercial companies for commercial customers, including foreign governments.

I count US Commercial Cargo and Crew flights as 'under contract to host government'; although the launch contract is through a commercial intermediary, the choice of vehicle is negotiated as part of a government contract.

Table 3: Commercial vs. government launches

Launch provider	Launches	Type	Customers
US Launch providers			
ULA/Boeing Delta 4	1	CSP	1 US Gov
ULA/LM Atlas 5	5	CSP	4 US Gov, 1 foreign (ESA)
SpaceX Falcon 9	25	FCS	7 US Gov, 2 foreign, 16 Comm
NG Antares	2	FCS	2 US Gov
NG Minotaur IV	1	CSP	1 US Gov
Astra Rocket	2	FCS	2 test flights
VO Launcher One	1	FCS	1 test flights
European Launch providers			
Arianespace Vega	2	FC?	1 Eur gov, 1 comm.
Arianespace Ariane 5	3	FC	3 comm/for.
Arianespace Soyuz	2	FC	1 Eur gov, 1 foreign
Starsem Soyuz	3	FC	3 comm.
Russian Launch providers			
Khrunichev Proton	1	GOV	1 Ru gov
Khrunichev Angara	1	GOV	1 Ru gov
Roskosmos Soyuz	4	GOV	4 Ru gov (civil)
VVKO Soyuz	6	GOV	6 Ru gov
Chinese Launch providers			
CALT CZ-2C	3	GOV	2 Chinese gov, 1 commercial
CALT CZ-2F	1	GOV	1 Chinese gov
CALT CZ-3B	8	GOV	6 Chinese gov, 2 commercial
CALT CZ-5/5B	3	GOV	3 Chinese gov
CALT CZ-6/7/8	3	GOV	2 Chinese gov, 1 commercial
CALT CZ-11	3	GOV	2 Chinese gov, 1 commercial
SBA CZ-2D	7	GOV	5 Chinese gov, 1 commercial
SBA CZ-4B/4C	6	GOV	6 Chinese gov
EXPACE KZ-1A	3	CO	3 Comm
EXPACE KZ-11	1	CO	1 Comm
XIDO Gushenxing 1	1	CO	1 Comm
Other Launch providers			
Rocket Lab Electron	7	FC	5 Comm, 2 US Gov
MHI H-IIA/B	4	CSP	3 Japan gov, 1 foreign
ISRO/Antrix PSLV/GSLV	2	GOV	2 Indian gov
IRGC Qased	1	GOV	1 Iranian gov
IRSA Simorgh	1	GOV	1 Iranian gov
ISA Shaviyt	1	GOV	1 Israeli gov
NADA Kwangmyongsong	0	GOV	0 North Korean gov

Here GOV = Government; CO = Commercial operation of government developed rocket; CSP = Commercial service provision to government; FCS = Fully commercial service (but customers may include gov); FC = Fully commercial (no gov involved); A = Amateur, academic, non-profit. See the 2014 document for full discussion.

## 2 Satellite Launch Statistics

### 2.1 Satellites of the major space powers, past 9 years

Here I give total payloads (1) launched (Table 4) and (2) deployed (Table 5). The 100+ Sprite satellites launched in 2018 but deployed in 2019 make a big difference between the two tables. These satellites remained in orbit for several days, but were not tracked or cataloged by the US.

The 1261 satellites listed here and in Appendix 2a as payloads launched in 2019 include 8 ANDESITE Node satellites attached to the ANDESITE satellite for later deployment.

Not included are satellites which did not reach orbit due to launch failures.

Also not included in the count, but listed at the end of Appendix 2c, are several objects which are marginal cases: the Kosmos-2543 projectile, which may or may not be considered as a payload, the FCC camera subsatellite ejected from Tianwen-1, the SSMS deployer system from Vega, the Gnome Chompski inert figurine attached to an Electron kick stage, and the Lander, ascender and return capsule from Change'-5.

Note that the correlation of specific satellites from a multi-satellite launch with specific catalog numbers (and thus, tracked objects) is uncertain in some case. This is indicated in the appendices with a question mark following the piece (international) designation.

Table 4: : Payloads launched per year

	2012	2013	2014	2015	2016	2017	2018	2019	2020
USA	35	85	111	112	95	282	311	308	979
Russia	22	29	34	27	15	24	23	31	22
China	25	18	26	44	40	36	98	73	74
Europe	22	34	29	22	22	42	52	45	129
Other	28	41	58	31	50	60	86	65	57
Total	132	207	258	236	222	444	570	522	1261

The 576 satellites listed here and in Appendix 2b as having been deployed during 2019 include many small satellites that were launched in 2018 and deployed in 2019, including the Sprite chipsats deployed from Kicksat-2 and the Thinsat satellites ejected from an Antares second stage. Neither Sprites nor Thinsats were cataloged in the US satellite catalog.

Table 5: : Payloads deployed per year

	2012	2013	2014	2015	2016	2017	2018	2019	2020
USA	35	84	96	106	105	288	195	369	991
Russia	23	29	33	27	14	25	23	29	21
China	25	17	24	44	38	35	95	74	72
Europe	22	34	29	22	20	43	48	45	130
Other	28	41	56	31	43	65	81	61	57
Total	133	205	238	230	220	456	442	578	1271

## **2.2 Satellite ownership by country**

I now break this down by class for 2020 (first the launch powers, then other countries).

In 2020 the satellites deployed were owned by 28 countries and two European organizations: ESA and the European Union.

In general I consider western Europe, loosely defined, as a single 'space power' because of the tight integration of its aerospace industry. Within this view, the four leading space powers are USA, China, Russia and (W) Europe. The second tier of space powers is comprised of Japan and India; all others are lumped as 'Other', further broken down regionally (and arbitrarily) for convenience. The 'Other' powers have limited or no launch capability of their own. (South Korea and Canada have space industries that make them candidates for the second tier in the near future). Countries which owned satellites covered in previous editions of the report are included in the table even if they had no new satellites this year.

Table 6: 2020 payloads launched, by owner country and class

	A Academic/ NonProfit	B Business/ Commercial	C Civil	D Defense	SS Spaceship	Total Number	Total Mass (tonne)
<b>USA</b>	15	935	2	20	7	979	341

<b>Total</b>	41	1111	42	54	13	1261	565

### 2.3 Satellite manufacture by country

Most countries build only very small (cubesat) satellites, purchasing their larger satellites from one of the main space powers. Here I tabulate the manufacturers of the 1049 satellites launched in 2020 with estimated launch masses of 100 kg or more.

HSF is 'Human spaceflight', including related robotic missions such as cargo ships to support ISS. 'Surv.' is surveillance, including early warning and space debris surveillance; visible and radar imaging recon satellites and weather sats are under 'Imaging'. Microgravity research, geodesy and planetary probes are included under Sci (Science). Satellites built in the UK, France, Germany, Italy, Spain and the Netherlands are lumped together as 'Europe' to reflect the integration of the western European aerospace industry.

Table 7: 2020 payloads by manufacturer country - 100 kg and up only

	HSF	Comms	Imaging	Nav	SIGINT	Surv.	Sci	Tech	Total
USA	7	839	9	2	6	0	2	4	869
China	1	3	14	2	6	1	7	7	41
Europe	0	107	2	0	0	0	2	1	112
Russia	4	9	0	2	0	1	0	1	17
India	0	2	1	0	0	0	0	0	3
Japan	1	1	2	0	0	0	0	0	4
Israel	0	0	1	0	0	0	0	0	1
Argentina	0	0	1	0	0	0	0	0	1

Total	13	961	31	6	12	2	11	13	1049

### 3 Scientific Space Programs

Major scientific satellites launched this year were

- Hai Yang 2-03, a Chinese oceanographic satellite.
- Sentinel-6 Michael Freilich, a European-American collaboration for oceanography
- GECAM A and B, a pair of Chinese satellites studying astronomical gamma ray bursts

In deep space:

- Three spacecraft were launched towards Mars: the NASA Perseverance Rover, China's Tianwen-1 orbiter/lander/rover, and the UAE's Al'Amal (Hope) orbiter. They will arrive at Mars in Feb 2021.
- ESA's Solar Orbiter was launched to begin a series of Venus flybys to lower its perihelion for close-up imaging of the Sun.
- The Chang'e-5 mission returned the first lunar samples since 1976 (see special topic).
- Hayabusa-2, launched in 2014, returned a capsule to Earth with samples of the asteroid Ryugu. The main spacecraft did an Earth flyby to send it to survey two other asteroids.
- Osiris-Rex completed sampling asteroid Bennu and began its return journey to Earth.
- BepiColombo made a Venus flyby on its way to Mercury.
- Parker Solar Probe made a Venus flyby and lowered its perihelion to only 0.095 AU.

### 4 Military Space Activities

Military satellites include navigation, communications, and technology development missions in addition to the intelligence gathering activities that I report here.

#### 4.1 Space Surveillance

China launched the TJS 5 geostationary satellite on Jan 7. It is thought to be Huoyan-2, an early warning payload. Russia launched the 4th Kupol payload (Kosmos-2546) on May 22, a Molniya orbit system superseding the Oko satellites.

#### 4.2 Optical Imaging

Israel launched its first imaging satellite in 4 years, Ofeq-16. The IRGC Noor-1 satellite is discussed under Special Topics. France launched its second large, high resolution spy satellite in the CSO (Composant Spatial Optique) series. The UAE armed forces launched a high resolution French-built imaging satellite, FalconEye 2. The Thai armed forces launched a cubesat with limited imaging capability.

China launched 6 imaging satellites in the civilian Gao Fen series: Gao Fen 9-02, 9-03, 9-04, 9-05, 11-02 and Gao Fen Duomo Weixing. It seems likely that these are also used for intelligence purposes. No dedicated Chinese military optical imaging satellites seem to have been launched in 2020.

#### 4.3 Radar Imaging

China launched Yaogan 33, which appears to be the first of a new SAST/Shanghai radar satellite series.

India launched EOS-1 (formerly RISAT-2BR2), a mostly civilian radar imaging satellite.

#### 4.4 Signals Intelligence

On Dec 11 the US NRO launched USA 311, a large geostationary signals intelligence satellite thought to be in the ORION series.

China launched nine Chuanxing-5 satellites in three launches, with the cover names Yaogan 30 group 5, 6 and 7. The satellites are in 600 km, 35 deg orbit.s

#### 4.5 NRO satellites with unknown missions

This year saw the launch of a number of NRO satellites whose missions are not yet clear. Another large NRO satellite, USA 310, was launched on Nov 13 to an unusual 11000 km, 58 degree orbit. Mission of this satellite is unknown.

A much smaller satellite, USA 294, was launched to 585 km orbit at 70 deg inclination on a RocketLab Electron flight on Jan 31. Three more smal satellites, USA 301 to USA 303, were launched to 600 km sun-synchronous orbit with 1730 local time descending node in June on another Electron. A further four small satellites, USA 305 to 308, were launched to 575 km orbit at 54 degrees inclination on a Minotaur IV on Jul 15. The mission of these satellites is unknown but may be signals intelligence or communications.

On Dec 19 the US NRO launched a pair of satellites, USA 312 and USA 313, to a 530 km, 51.4 deg orbit. Mission of these satellites is also unknown.

#### 4.6 USA satellite designations in 2020

The USA satellite designations were introduced in 1984 for US military satellites, to obscure the missions of the secret ones. Here is an index of USA names assigned in 2018-2020. Note that USA 295 to 297 were deployed from the OTV-5 mission in 2017 but not acknowledged until 2020.

The agency abbreviations are:

2SWS	2nd Space Warning Squadron
2SOPS	2nd Space Ops Squadron
4SOPS	4th Space Ops Squadron
AFRL	Air Force Research Lab, Kirtland AFB, NM
Del 4	Delta 4, US Space Force
Del 8	Delta 8, US Space Force
NRO	US National Reconnaissance Office
RCO	USAF Rapid Capabilities Office, Wright-Pat. AFB, OH
SMC	Space and Missile Center, LAAFB, US Space Force

Table 8: : USA satellite designations 2017-2020

Cover name	Other name	Piece name	Agency	Orbit	Notes

## 5 Special Topics

### 5.1 IRGC satellite launch

In April 2020 the Sepah-e Pasdaran-e Enghelab-e Eslami (انقلاب پاسداران سپاه اسلامی, Islamic Revolutionary Guard Corps), hereafter the IRGC, carried out its first satellite launch, with the new Qased launch vehicle. Previous Iranian launches were carried out by the civilian Sazman Fizaii Iran (ایران فضایی سازمان, Iranian Space Agency).

Iran has developed three satellite launch vehicles:

- Safir (IRSA); based on the Shahab-3 missile with a liquid second stage. Launched from Khomeini Space Centre.
- Simorgh (IRSA); based on a larger first stage similar to the North Korean Unha, with a liquid second stage and probably a solid propellant third stage. Launched from Khomeini Space Centre.
- Qased (IRGC); based on the Shahab-3 missile, probably with a Salman-1 solid second stage and a small solid propellant third stage, possibly the Arash-24. Launched from Shahroud missile base.

The Shahroud base in the Dasht-e Kavir desert of northeastern Iran had previously been used for missile tests but this was the first orbital launch from the site. The pad is at 55.3340E 36.2006N.

Launch was at 0358:59 UTC on Apr 24. The first stage made a 117s burn and impacted in southern Iran, in Baluchistan. The second stage ignited at T+2m39s for about 65s and reached a -4121 x 447 km x 58.6 deg orbit with impact in the Indian Ocean southwest of Sri Lanka at about 75E 2N. The third stage ignited at T+7m04s for a 25s burn, placing the Noor 1 (نور ۱, 'Light') satellite in a 426 x 444 km x 59.8 deg orbit. Based on a graphic on the side of the fairing, I believe Noor 1 to be a 6U cubesat, probably with a mass in the 10 to 15 kg range. The IRGC states it was intended for reconnaissance, and it probably has a camera in the 5-metre resolution class. Amateur radio operators in the West picked up signals from the satellite soon after launch, confirming that it was alive after launch. IRGC announced that attitude stabilization would take several days before the payload would begin operations. As of mid-May, it was unclear whether or not the satellite was fully operational.

The satellite and third stage were cataloged by the US 18SPCS with international designations 2020-024A and B.

## 5.2 Starlink

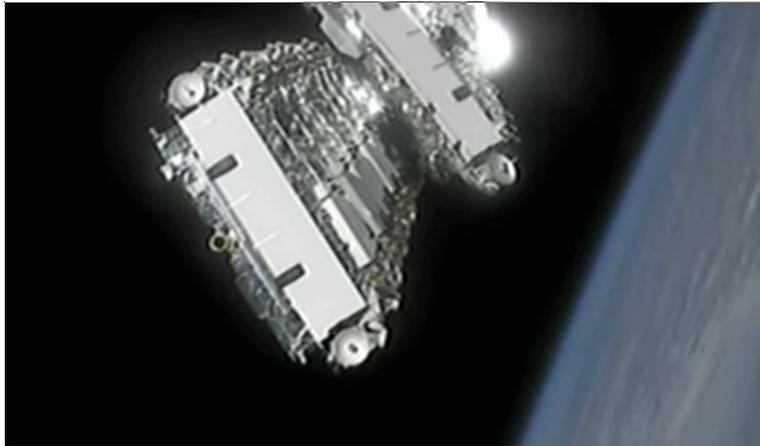

Figure 4: Starlink Launch 7 satellites beginning to deploy. Credit: SpaceX (webcast).

Deployment of the Starlink constellation accelerated during 2020. 422 satellites had been launched by late April and 955 by the end of the year, although only 892 remained in orbit. Starting with the 9th launch visors were added to the satellites to reduce the brightness of the satellites and begin addressing the concerns of astronomers.

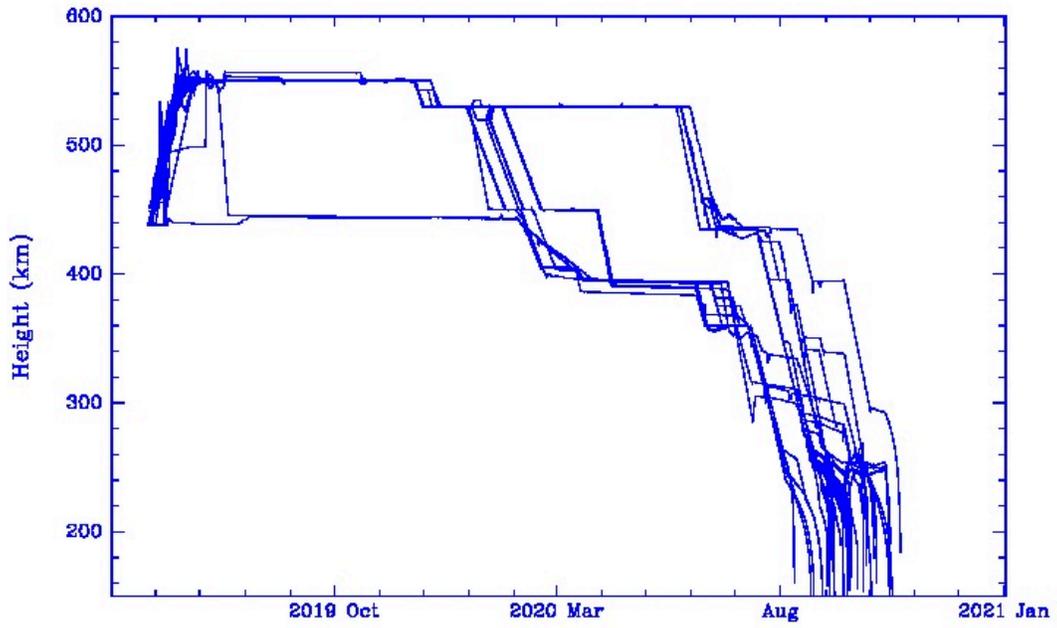

Status of the constellation on 2020 Dec 31 was:

Launch	Sats Launched	Deorbited	Reentered after fail	Still in orbit	Not maneuvering	Deorbit in process?	Working?
Launch 0 (Tintin)	2	2	0	0	0	0	0
Launch 1 (V0.9)	60	46	1	13	7	0	6
Launches 2-8 (V1.0/1-7)	420	7	3	410	10	0	400
Launches 9-16 (V1.0/8-15)	473	0	4	469	0	1	468
Total	955	55	8	892	17	1	874

Some Starlink launches have carried ‘rideshare’ secondary payloads. Starlink launch 10 carried two BlackSky satellites, Global-7 and Global-8; launches 9 and 11 carried Planet Skysats C14-C16 and C17-C19.

The following diagrams show the orbital altitude versus time for each group of satellites.

### Starlink Launch 1 - 'Good' Sats

### Starlink Launch 1 - bad sats

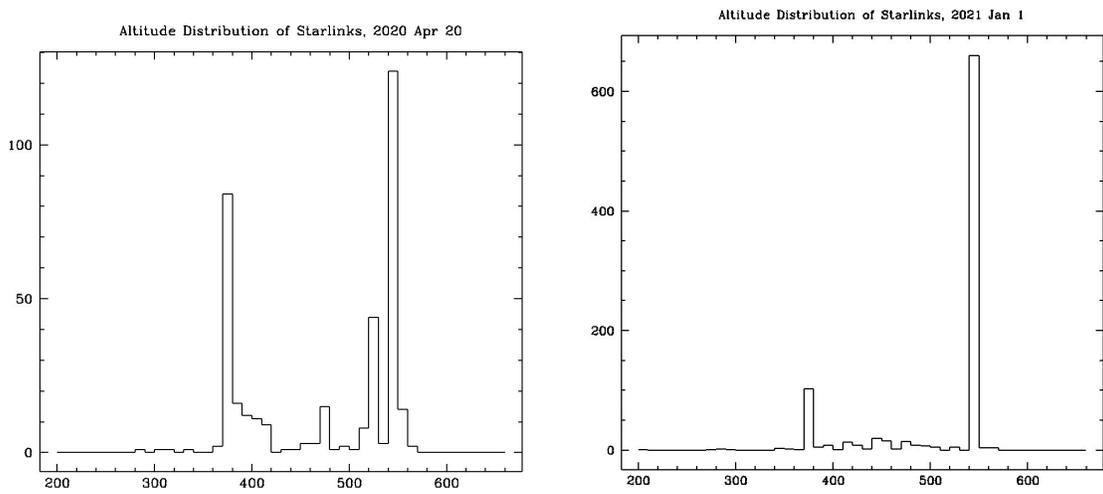

Figure 9: Starlink satellite altitudes.

On Apr 13 the ISS crew took a picture of a string of passing Starlinks. Below I show the positions of all the Starlinks at that moment.

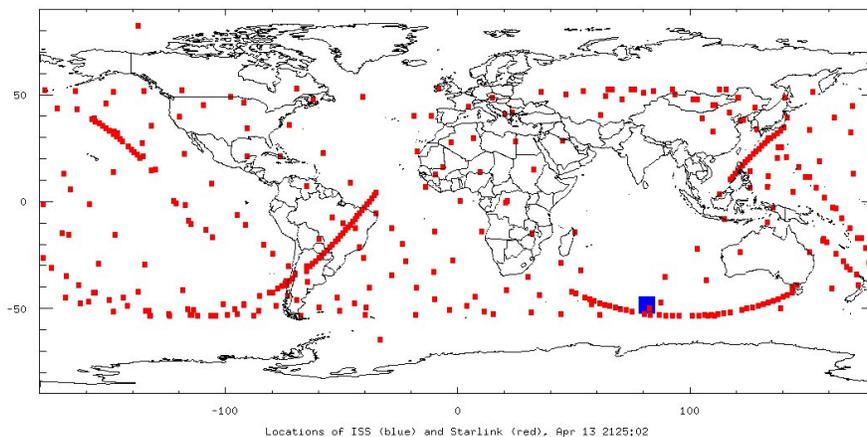

Figure 10: Starlink positions at 2125 UTC Apr 13

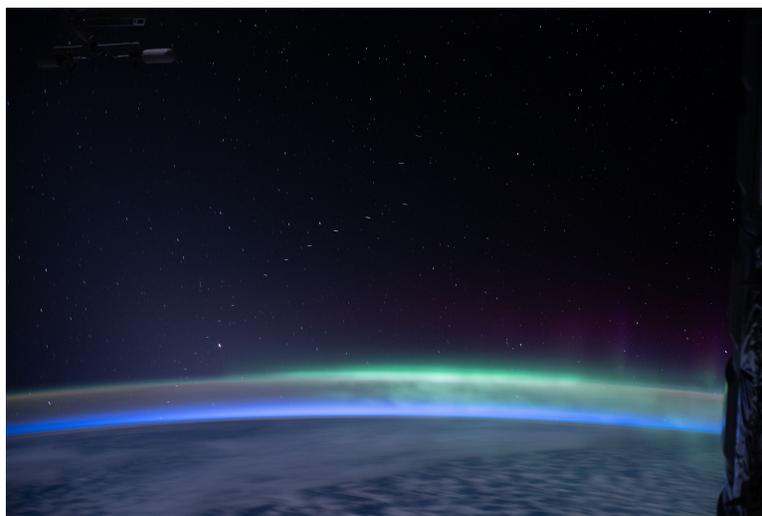

Figure 11: ISS image Expedition 62 E-148365

### 5.3 OneWeb

OneWeb declared bankruptcy in April 2020. Orbit raising of the Launch 2 satellites was interrupted and they were kept at 600 km to maximize constellation safety and flexibility. The company was bought by a collaboration of the UK government and the Indian company Bharti Global and launches resumed in Dec 2020.

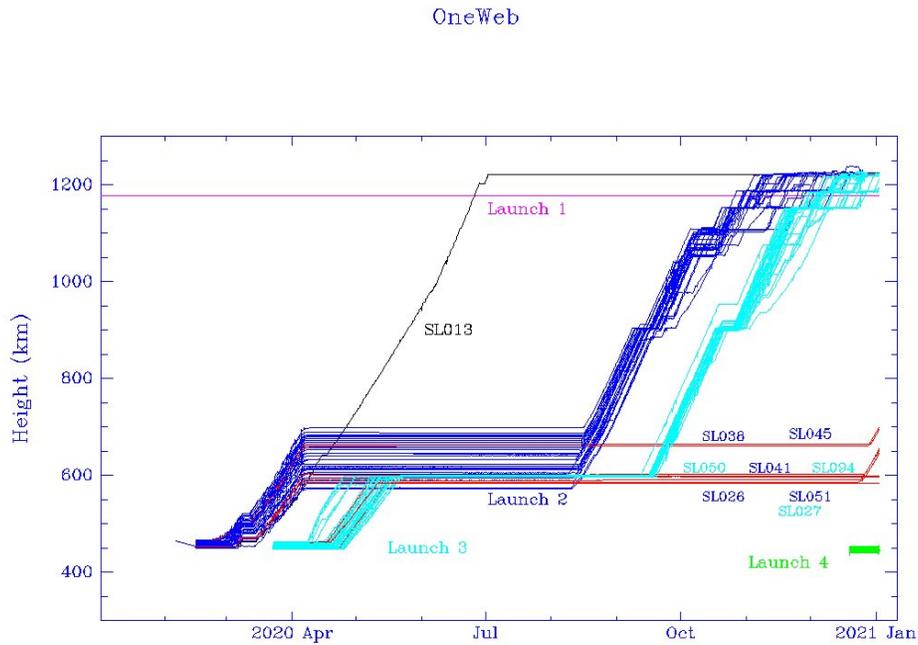

Figure 12: OneWeb satellite heights.

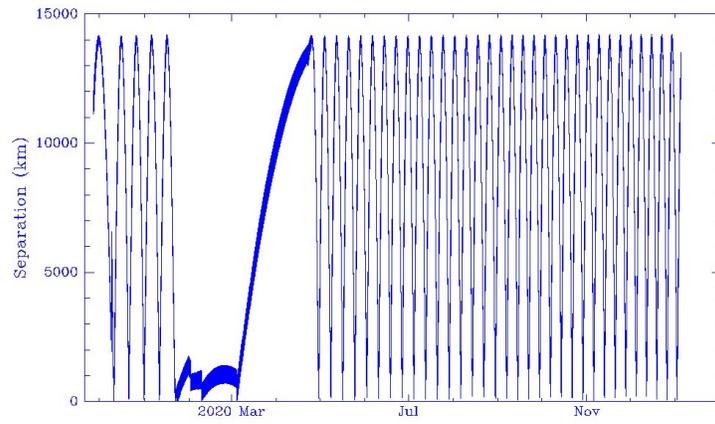

#### **5.4 Kosmos-2542, Kosmos-2543, Kosmos-2535 and USA 245**

During 2020 the inspector satellites Kosmos-2542, Kosmos-2543 and Kosmos-2536 carried out related proximity operations exercises. From 2019 Dec to 2020 Feb, Kosmos-2536 remained close to Kosmos-2535. Then from 2020 Feb to 2020 Mar, the Kosmos-2542 and possibly Kosmos-2543 satellites appear to have carried out an unprecedented experiment in shadowing another nation's military satellite in LEO. Kosmos-2542 adjusted its orbit to synchronize with USA 245, making approaches to within 500 km.

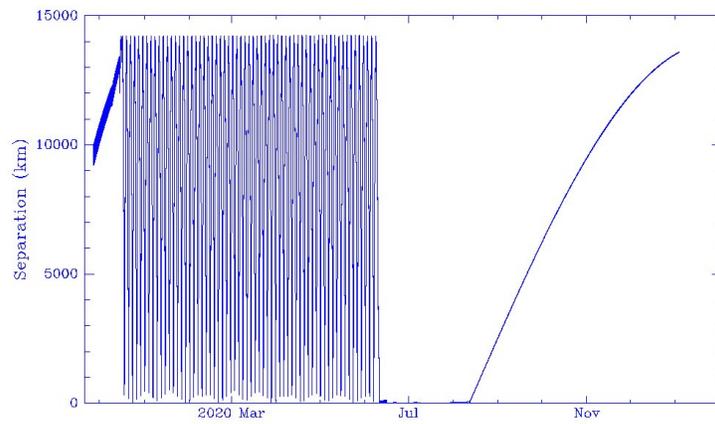

Kosmos-2543 may also have been involved in the exercise; it made several fast passes near USA 245 in the 20-30 km distance range during 2020 Jan-Feb, but it's not entirely clear whether this was just a coincidence.

Next, from 2020 June to 2020 Aug, Kosmos-2543 moved close to Kosmos-2535. Finally, since 2020 Aug, Kosmos-2536 moved back to the vicinity of Kosmos-2535 and has remained there. The phasing of these four operations may suggest that the Russian controllers are limited in their resources to carrying out only one such exercise at a time.

Kosmos-2542/USA 245 separation

Kosmos-2543/Kosmos-2535 (44835/44421) separation

Kosmos-2536/Kosmos-2535 (44424/44421) separation

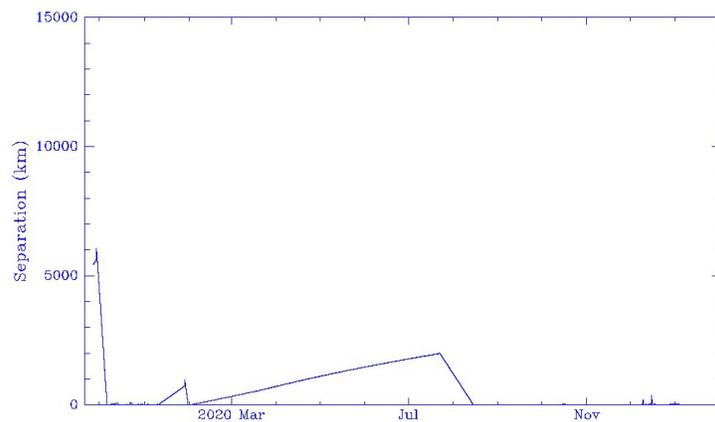

Figure 13: Distance between Kosmos-2542 and USA 245; Kosmos-2543 and Kosmos-2535, and Kosmos-2536 and Kosmos-2535 during 2020.

### 5.4.1 Kosmos-2542 and USA 245

The figures show the relative height and separation distance of Kosmos-2543 and the US satellite USA 245.

Kosmos-2542/USA 245 orbital height

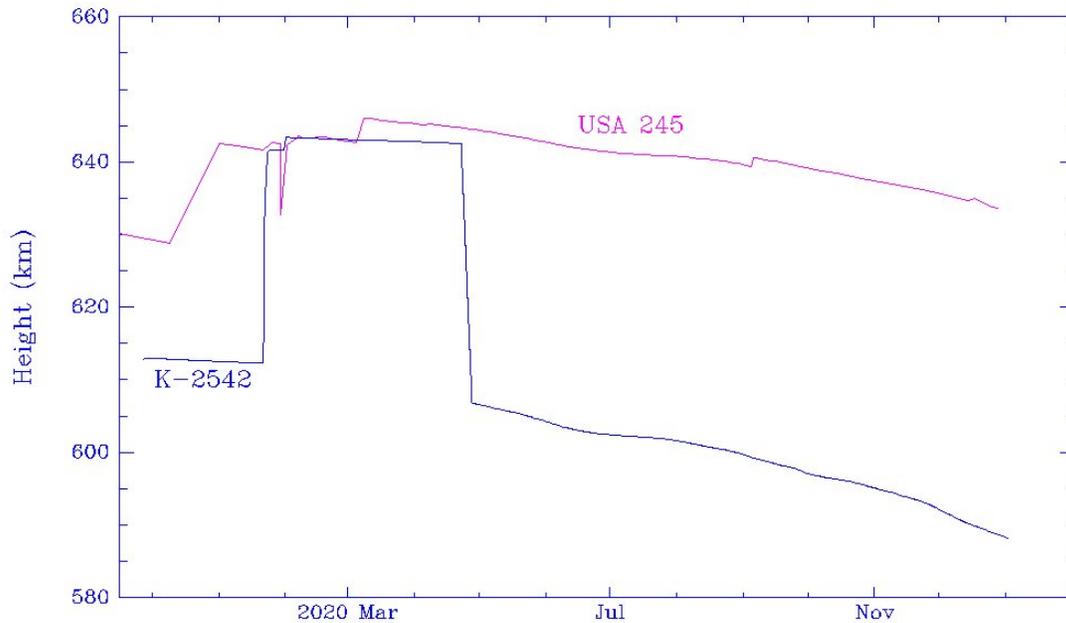

Figure 14: Kosmos-2542 and USA 245 orbital heights.

### 5.4.2 Kosmos-2543 and Kosmos-2535

In 2020 Jun Kosmos-2543 made a loose rendezvous with the Kosmos-2535 satellite, passing within a few km and remaining within 100 km for a few weeks. It then spent a month making close approaches before departing on Jul 20. On 2020 Jul 15 Kosmos-2543 ejected a high velocity (of order 150 m/s) projectile while close to Kosmos-2535, cataloged as 45915/2019-079E. It has been suggested that this was a test of an antisatellite weapon, or of sensors on the target satellite to detect such a weapon.

I will also note the appearance of an unidentified object in orbit with the latest Gonets launch (2020-091E). It's probably just a debris object but past Gonets/Strela-3 launches have sometimes been accompanied by small satellites that are apparently related to the Kosmos-2535 series.

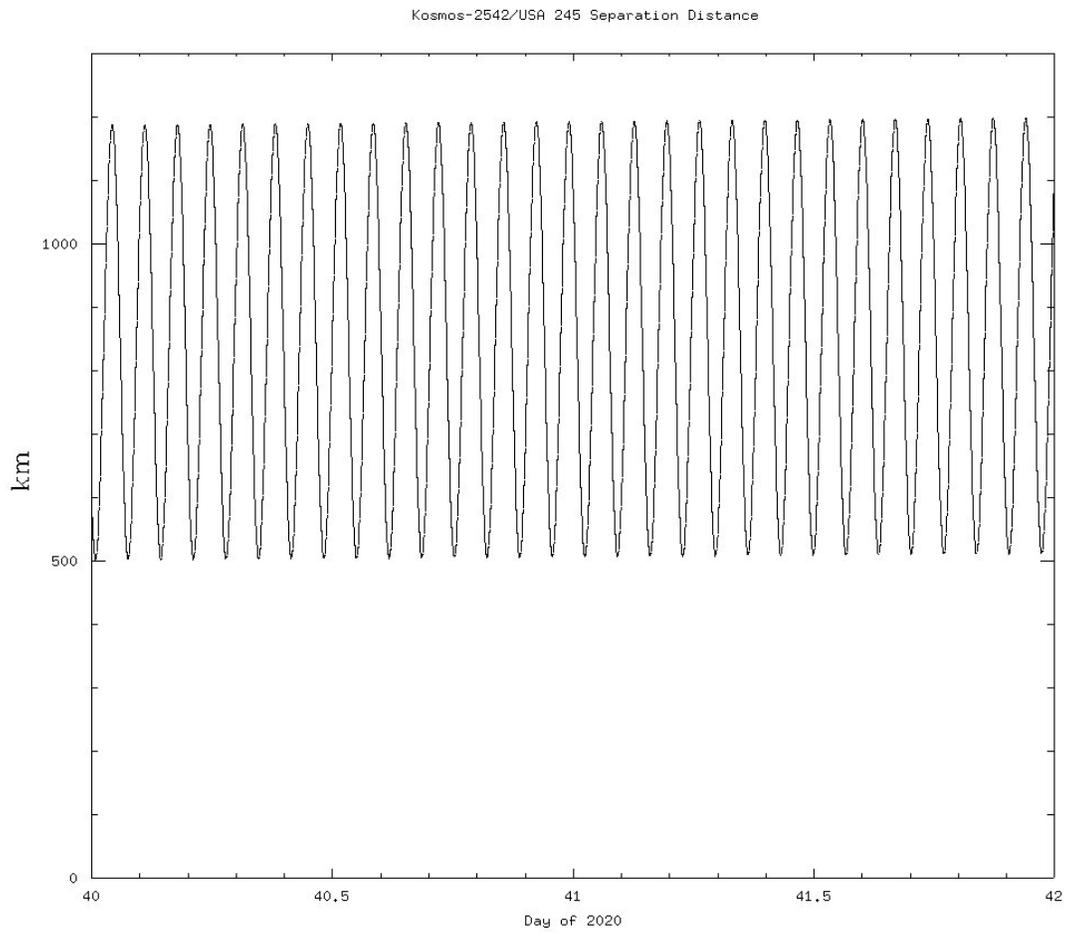

Figure 15: Distance between Kosmos-2542 and USA 245 for two days during Feb 2020.

Kosmos-2543/Kosmos-2535 (44835/44421) separation

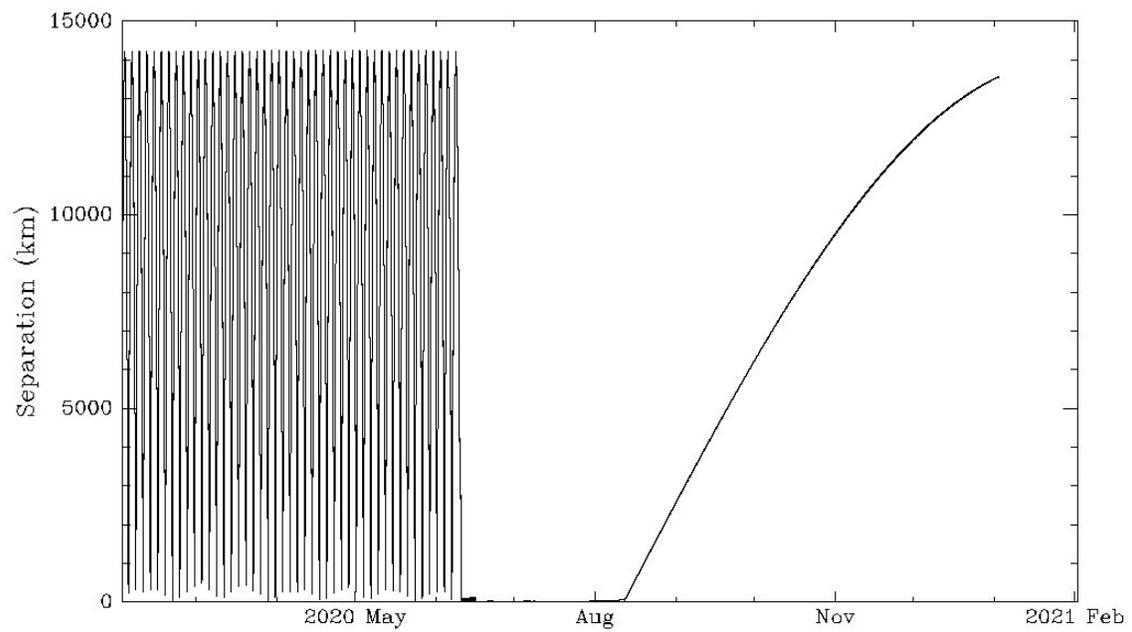

Figure 16: Kosmos-2543 and Kosmos-2535 were close during 2020 Jun-Jul.

Kosmos-2543/Kosmos-2535 (44835/44421) separation

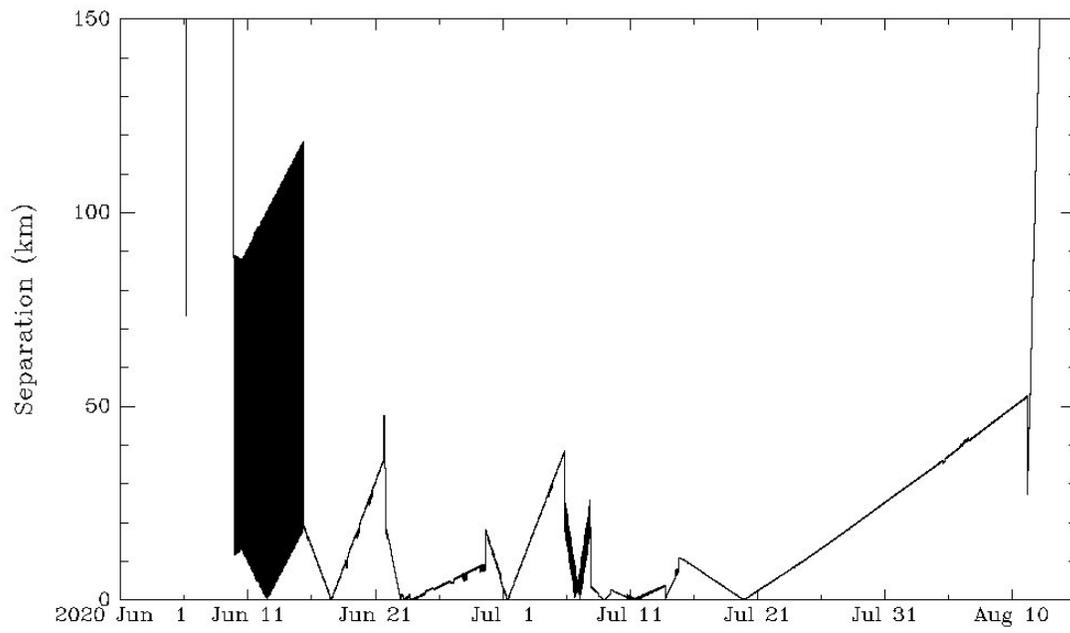

Figure 17: Details of Kosmos-2543 and Kosmos-2535 close approaches during 2020 Jun-Jul.

### 5.4.3 Kosmos-2536 and Kosmos-2535

Kosmos-2535 and Kosmos-2536 performed rendezvous and possibly docking operations for an extended period starting on 2020 Aug 18. The satellites had carried out a previous set of exercises during Jul-Dec 2019.

Kosmos-2535/Kosmos-2536 orbital height

Kosmos-2535/Kosmos-2536 separation

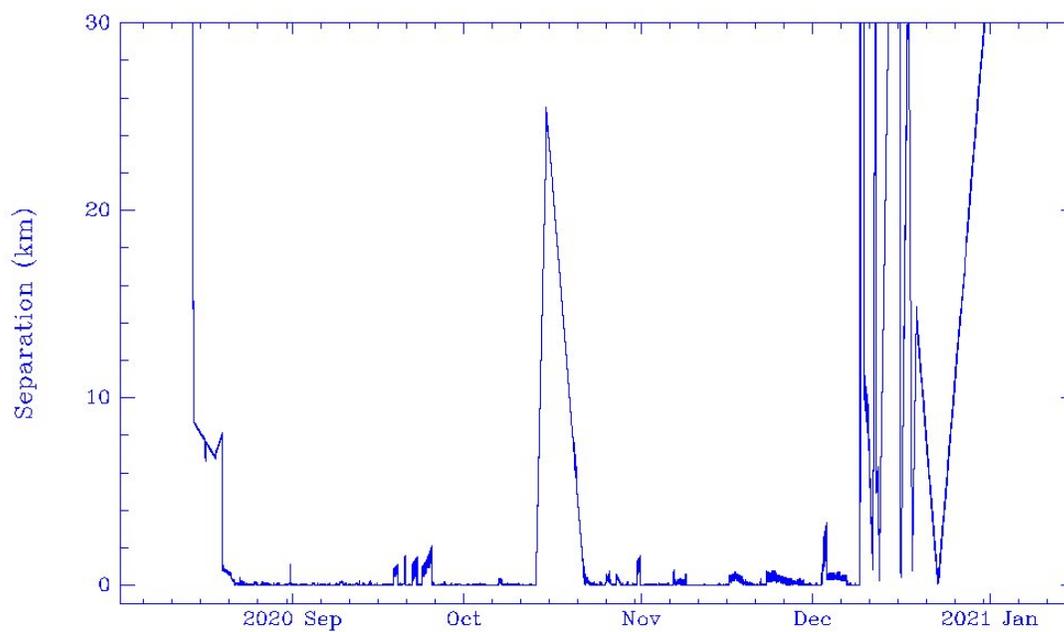

Figure 20: Details of Kosmos-2536 close approaches to Kosmos-2535, second exercise.

## 5.5 Indian ASAT

The Indian ASAT test was discussed last year. By end 2020 most of the debris had reentered, as shown here. With the decay of object DM (magenta) on Dec 28, only 4 objects (red) remained tracked in orbit.

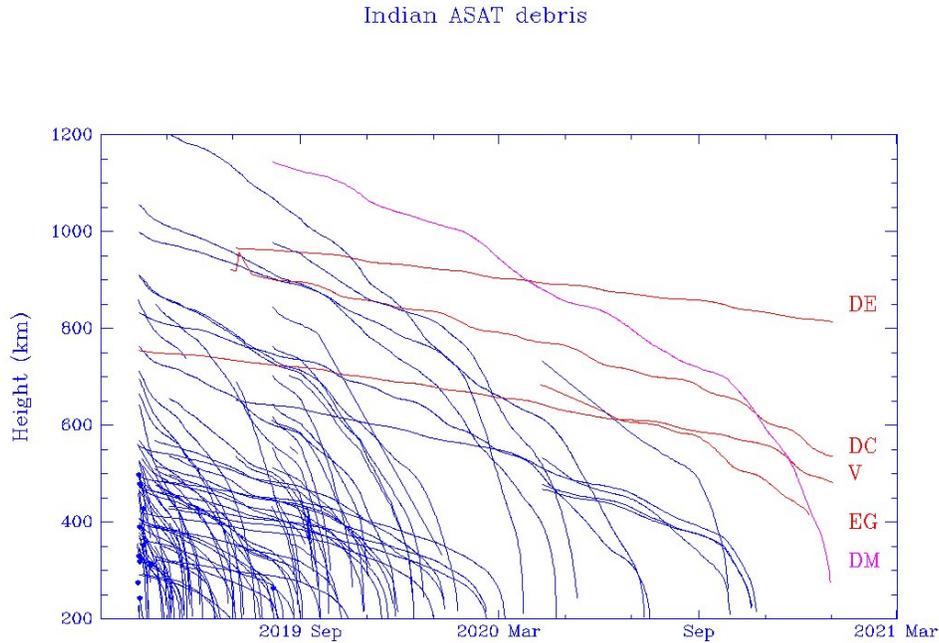

Figure 21: ASAT debris orbital average height vs time

## 5.6 CZ-5B-Y1 launch

China's most powerful rocket is the Chang Zheng 5 (Long March 5, CZ-5). It has four liquid side boosters (stage 0) a central core (stage 1), and an optional upper stage (stage 2). After three launches of the standard variant in 2016, 2017 (failure), and 2019, the fourth launch, CZ-5B s/n Y1, was the first use of the CZ-5B version which omits the upper stage and is used for heavy low orbit payloads.

The vehicle was launched on May 5 and placed a 21.6 tonne prototype spaceship in a 162 x 377 km x 41.1 deg low orbit. The ship has a 3.3m dia 3.0m long conical crew module ('Return cabin', fanhui cang 返回舱) and a 3.3m dia 5.8m long service module (fuwu cang, 服务舱). The spacecraft was developed by CAST/Beijing, and is referred to in Chinese announcements as 新一代载人飞船试验船, Xinyidai Zairen Feichuan - Shiyan Chuan (New Generation Crewed Spaceship - Test Ship). I will abbreviate it as XZF-SC or just XZF. XZF raised its orbit to 299 x 719 km x 41 deg on the first day in space and by May 7 had reached 523 x 6278 km x 42.9 deg. On May 7, possibly about 1130 UTC, a final orbit raising burn put the apogee at around 8000 km, but no TLEs are available for this phase. At about 0415 UTC the ship began a deorbit burn of about 120 m/s which was concluded at 0421 UTC. This lowered perigee into the atmosphere. The return cabin (fanhui cang) separated from the service module (fuwu cang) at 0533 UTC. Entry interface was at 0538 UTC with a 9.0 km/s entry speed, followed by parachute descent and an airbag-assisted landing near Jiuquan Space Centre at 0549 UTC. Total delta-V of the XZF mission was around 2.0 km/s, implying a propellant load of over 10.3 tonnes and a dry mass of at most 11.3 tonnes. (Most likely there was a propellant reserve and the spacecraft dry mass is around 10 tonnes, divided in an unknown ratio between the cabin and the service module).

A second payload was referred to as Rouxing Chongqi Shihuowu Fanhui Cang - Shiyang Cang, (Flexible Inflatable Cargo Return Module - Test Module, 柔性充气式货物返回舱试验舱). It is a recovery test of a capsule with an inflatable heat shield, and was developed by the CASIC organization. The 1.0 x 1.5m experiment was ejected from the rear of the XZF service module and inflated a 3-metre conical heat shield. The vehicle was deorbited on May 6 for a landing east of Jiquan at around 0515 UTC. However the recovery was reported to be unsuccessful.

The 21.6 tonne CZ-5B core stage was left in a 157 x 372 km orbit, which decayed by May 11 to 124 x 153 km. During its last orbit it flew directly over Los Angeles and New York City. The core stage began an uncontrolled reentry at 1534 UTC May 11 over 20W 20N, as it flew over the Atlantic heading towards Nouakchott, Mauritania. Some of the denser debris impacted the ground 2200 km further downtrack, in the Bocanda region of Cote d'Ivoire. 10-metre-long metal rods fell from the sky in several villages, causing minor damage to houses and equipment but no reported casualties. CZ-5B-Y1 was the 5th most massive object ever to make an uncontrolled reentry, after OV-102 Columbia (2003), Skylab (1979), Skylab S-II rocket (1975), and Salyut-7 (1991).

Figure 22: CZ-5B reentry track

## 5.7 Chang'e-5 mission

China's CALT launched a Chang Zheng 5 (serial Y5) from Wenchang at 2030 UTC on Nov 23 carrying Chang'e-5.

The 8200 kg Chang'e-5, developed by CAST/Beijing and the Chinese Lunar Exploration Program, is a robotic sample return mission - the first such to the Moon since Luna-24 in 1976. The mission successfully landed on the Moon and returned its samples to Earth after a 23 day mission. It included the first automatic rendezvous, docking and sample transfer in deep space.

Chang'e-5 consists of a number of components ( abbreviations are mine):

- SM, Service module, which will perform lunar orbit insertion and transearth insertion burns. Chinese name: Guidao Qi (orbiter vehicle, 嫦娥五号轨道器 )
- DS, descent stage (Lander), which will separate in lunar orbit, land near Mons Rumker, and obtain a surface sample. Chinese name: Zhuolu Qi (lander vehicle, 嫦娥五号着陆器 )
- AS, Ascent stage, which will take off from the lunar surface carrying the sample and dock with the service module's docking adapter in lunar orbit. Chinese name: Shangsheng Qi (ascent vehicle, 嫦娥五号上升器 )
- AD, Adapter, which joins the service module to the lander at launch and contains the return capsule and docking adapter. Chinese name: Lianje Zhijia (connecting frame, adapter, 轨道器与着陆器连接支架 ). Left in lunar orbit.
- DA, Docking adapter, mounted on top of the return capsule. Contains a mechanism to transfer the sample from the ascent stage to the return capsule. Chinese name: Jiaohui duijie jigou (rendezvous/docking mechanism, 交会对接机构 )
- RV, Return capsule, which separates from the service module and lands in China. Chinese name: Fanhui Qi (return vehicle, 嫦娥五号返回器 )

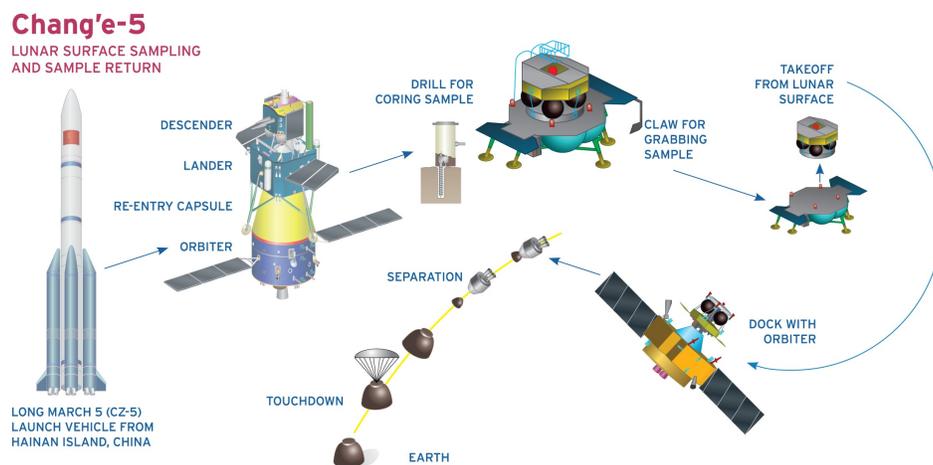

Figure 23: Change'e-5 mission components: graphic from The Planetary Society

The mission was pretty complicated; here I list the various stages of it (all times UTC):

Nov 23 2030	Launch
Nov 23 2042	Earth parking orbit, attached to CZ-5 stage 2
Nov 23 2058	7 minute translunar injection burn by CZ-5 stage 2, cutoff at 2105
Nov 23 2106	CE-5 separates from stage 2, stage 2 propellant dump to 22 x 291690 km orbit
Nov 23 2107	Translunar coast, 201 x 392980 km x 21.3 deg
Nov 24 1406	TCM-1 trajectory correction maneuver
Nov 25 1406	TCM-2 trajectory correction maneuver
Nov 27 0800	CZ-5 second stage reaches apogee at 291690 km
Nov 27 1840	CE-5 enters lunar gravitational sphere of influence
Nov 28 1258	Lunar orbit insertion burn to 216 x 5585 km x 42.4 deg elliptical orbit, burn completed 1315 UTC
Nov 29 1223	Lunar orbit maneuver to 217 x 217 km x 42.4 deg circular orbit
Nov 29 2040	DS+AS separate from SM+AD (with DA+RV inside AD), in lunar orbit
Nov 30 1423	DS+AS move to low perilune orbit, 19 x 217 km
Nov 30 1541	CZ-5 second stage reenters over 136W 4N
Nov 30 1822	DS+AS move to pre-descent orbit, about 19 x 67 km?
Nov 30 2345?	SM+AD move to low perilune orbit (77? x 217? km)
Dec 1 1458	DS begins powered descent burn
Dec 1 1511	DS+AS land on the Moon at about 51.9W 43.1N, in northeast Oceanus Procellarum, north of the Louville Omega hills.
Dec 2 1946?	AD is ejected from SM+RV+DA, in lunar orbit, Dec 2
Dec 2 2053	DS+AS sample collection complete
Dec 3 1510:21	AS takes off, leaving DS on the Moon
Dec 3 1527	AS enters lunar orbit and begins rendezvous with SM+RV+DA.
Dec 4?	AS rendezvous burns 2 and 3
Dec 5 2142	AS docks with DA;
Dec 5 2212	DA transfers sample from AS to RV.
Dec 6 0335	AS+DA ejected from SM+RV.
Dec 7 2259	AS+DA deorbit burn
Dec 7 2330	AS+DA impact lunar surface near 0E 30S
Dec 12 0154	SM+RV move to elliptical lunar orbit, about 215 x 5680 km x 42 deg
Dec 13 0151	SM+RV perform transearth insertion burn, 22 min duration
Dec 13 0213	SM+RV TEI burn shutdown, on lunar escape hyperbola
Dec 13 1700?	SM+RV leave Lunar gravitational sphere of influence, begin trans-earth coast
Dec 14 0313	SM course correction
Dec 16 0115	SM course correction
Dec 16 1712?	RV separates from SM, 5000 km altitude
Dec 16 1715?	SM avoidance maneuver (to entry or to escape?)
Dec 16 1733	RV Earth atmosphere entry 120 km, 11.2 km/s
Dec 16 1733?	SM performs avoidance burn and inserted on trans-L1 trajectory
Dec 16 1735?	RV skip perigee at 60 km
Dec 16 1740?	RV skip apogee at 120 km
Dec 16 1749	RV second atmosphere entry over China
Dec 16?	RV jettisons aeroshell, deploys parachute
Dec 16 1759	RV lands in Siziwang Banner, Inner Mongolia, 111 26 20E 42 20 19 N
Early 2021	SM reaches Sun-Earth L1 region to begin new mission?
2021?	AD in lunar orbit perturbed by mascons and impacts lunar surface (probably within 1 year)

I have updated GCAT to include the Chang'e-5 ascent stage ('Shangsheng Qi') launch as follows:

- The engine is for now designated as SSQ Engine until we get a real designation for it.
- The launch vehicle is designated CE-5 SSQ (short for Chang'e-5 Shangsheng Qi)

- The launch vehicle is part of the new launch family CE5SSQ
- I am calling the launch site Louville Omega North, and giving it the site code LOMN.
- The launch ‘pad’ is CE-5 ZQ (short for Chang’e 5 Zhoulu Qi, CE-5 lander).
- The launch from the lunar surface is given the launch designation 2020-U02
- The ascent stage is GCAT deep space catalog number D01048. It has launch code 2020-087 until lunar landing, and 2020-U02 afterwards.

## **5.8 ISS traffic in 2020**

Table 9 lists arrivals, departures, deployments and spacewalks at ISS during 2020.

Table 9: ISS event log, 2020

Date	Piece	Name	Operator	Event	Loc	Crew
2020 Jan 7 0841	2019-083A	Dragon CRS-19	SpaceX	Depart	Harmony N

# ISS traffic 2020

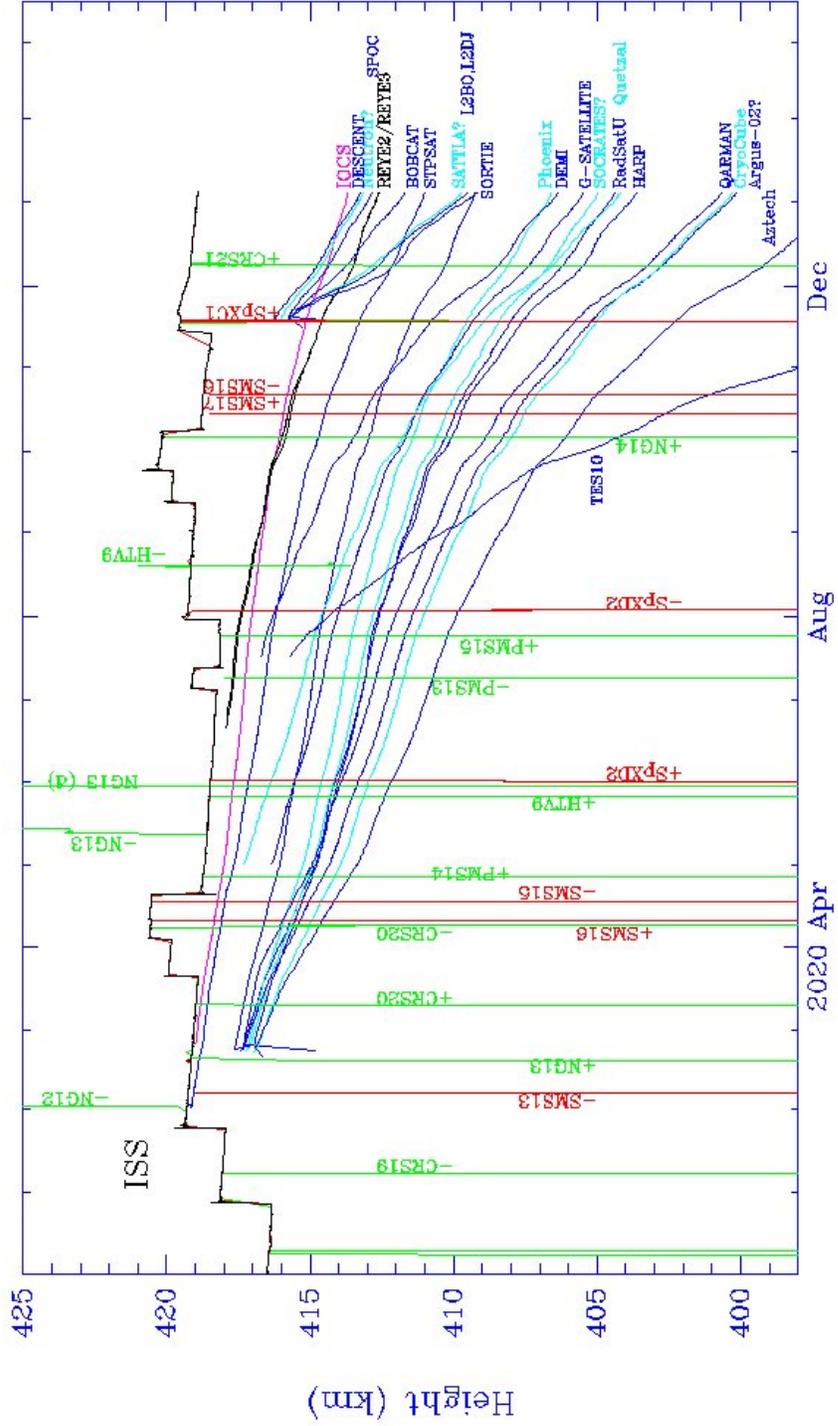

Figure 24: ISS traffic in 2020: Height vs Time plot

## 5.9 New geosynchronous satellites in 2020

Table 10 lists geosynchronous satellites launched in 2020 and gives their positions at the end of the year.

The Angara-A5 test flight on Dec 14 flew a Briz-M stage with a dummy payload to GEO, and then on the same day moved to a graveyard orbit.

Table 10: Geostationary satellites launched in 2020, ordered by longitude

Piece	Name	Operator	Location	Mission
2020-056C	Galaxy 30	Intelsat	171W relocating	Comms

## 5.11 Special Topics followup

- The illegal secret satellite deployments from OTV-5 have now been acknowledged. As I guessed, there were 3 satellites deployed and they have been given catalog numbers 45169 to 45171, and international designations 2017-052C to E. No orbital data were released, but it was announced that they were no longer in orbit as of 2020. OTV-6 was launched on 2020 May 17 and deployed the Falconsat-8 satellite on about May 28. At the end of the year it remained in a 386 x 389 km x 45.0 deg orbit.
- TJS-3 remained at 173E until 2020 Aug 4; it moved to 110.7E, where it stayed from Sep 22 to Dec 18 and then began to move again. The TJS-3 subsatellite remained on station at 59E.

## 6 Orbital Debris and Orbital Decay

At the end of 2020 there were 21593 cataloged objects in orbit or beyond and the total known mass in orbit increased to 9367 tonnes. The breakdown for number of objects is listed in table 12 and for the mass in orbit in table 13. Note that the sum of the individual mass figures falls short of the mass totals by a few tonnes due to complications with spurious catalog entries; but the uncertainties on those totals are probably in any case probably of the order of ten percent due to the uncertainty on masses of individual objects.

I include as active payloads any satellite thought to be still transmitting even occasionally, while other sources may only include those thought to be in full operational service. In either case, distinguishing active from dead payloads is often partly guesswork for those satellites which do not perform regular orbital maintenance maneuvers, and the uncertainty in the total number of active satellites is probably of order 10%.

Estimates of total debris masses have been updated, and are somewhat lower than in previous editions of this report. A new category ‘Alt.Pay.’ (alternative payloads) has been added as a bookkeeping convenience to account for objects that are in a marginal category - could arguably be considered payloads but are not counted as such in most lists. They are mostly short lived and so make only a small contribution here.

Figure 30 shows the evolution of the debris population versus time; this year I mark Starlink satellites as a separate category. In Figure 31 to 34 I show subsets of this data for small and large objects (below/above 100 kg) and for the lower and upper parts of LEO (below/above 600 km), showing the dramatic difference in the population and its evolution for LLEO (Lower LEO, below 600 km) and ULEO (Upper LEO, 600-2000 km).

Table 12: Debris objects in orbit at end of year, 2014-2020

Dec 31	Active Payloads	Dead Payloads	Alt Pay	Rocket Bodies	Op'l Debris	PRC FY1C debris	Strela Iridium deb	Other debris	Spurious	Total

## **6.1 Disposal of launch vehicle upper stages**

For the 104 successful orbital launches I look at which launches went to which type of orbit, and whether rockets disposed of their upper stages in a controlled deorbit or whether they left one or more stages (and possibly associated debris) in orbit to decay naturally. Upper stages that achieve Earth escape are also counted as a controlled disposal.

The orbit categories are SSO (Sun-synchronous low Earth orbit), ISS (International Space Station launches), Other LEO (Low Earth orbit except for SSO and ISS); GTO (Geotransfer orbit), GEO direct (where launch vehicle upper stage deploys payload directly in geostationary orbit), 12-hour circular MEO orbits (as used by GPS), deep space (beyond about 150,000 km) and 'other high orbit'.

I will note that some SSO/other LEO launches perform a perigee lowering disposal burn to ensure stage reentry within a few weeks. However, the reentry location is still uncontrolled in these cases. Cases where SSO/LEO perigee lowering is to below 180 km are noted with an asterisk in the table.

Table 14: Launches by orbit and launch-associated Earth orbit debris, 2020

## 6.2 Orbituaries

Table 15 gives statistics on reentries in 2020, not including deliberate deorbit and landing.  
(Acknowledgements to Collin Krum for the revised section name).

Table 15: Uncontrolled Reentries 2020

	Number	Mass (t)
Active Payloads	84	14.4
Dead Payloads	19	4.0
Rocket bodies	48	100.7
Operational debris	87	7.4
PRC ASAT/FY-1C debris	9	-
Strela/Iridium debris	12	-
Other fragment debris	132	-

In this table, ‘active payloads’ represents payloads which were thought to be active at the beginning of the year.

## Controlled deorbits and landings

116 Starlink satellites, mostly the V0.9 prototypes, reentered during 2020. The satellites orbits were lowered using thrusters but final reentry was uncontrolled.

The largest reentry was that of the CZ-5B Y1 first stage discussed earlier in this report.

In addition to uncontrolled reentries, there were 11 controlled landings and 4 controlled deorbitings of spacecraft during 2019, representing the safe removal of around 54 tonnes from the orbital environment. 3 Russian Soyuz ships landed in Kazakhstan one Crew Dragon ship splashed down in the Atlantic and two Cargo Dragon spacecraft splashed down in the Pacific near California. A test flight of a new Chinese spaceplane landed at Nop Nor and an experimental Chinese capsule landed in Inner Mongolia. A small reentry experiment also attempted a landing there but crashed. Two sample return capsules, from Hayabusa-2 and Chang'e-5, returned to Earth from deep space.

Four ISS cargo ships (two Cygnus, one HTV and one Progress) were deorbited, all over the southern Pacific Ocean.

Eight objects reentered and burned up on controlled trajectories associated with landings of spacecraft (Soyuz orbital and propulsion module and two Dragon trunks).

In addition, 37 rocket stages were deorbited after only one or two Earth orbits. Only one of these was assigned a US Space Command catalog number.

A further 16 rocket stages were inserted into slightly suborbital trajectories that ensured controlled disposal without the need for a deorbit burn (3 Ariane EPC, 1 Vega Z9A, 1 Proton stage 3, 1 Angara URM-2, 10 Soyuz-2 stage 3).

Table 16: Most massive uncontrolled reentries, 2020

COSPAR	Spacecraft	Date	Mass/kg	Location	Coords	Type
2020-070BS	Falcon 9-082 Stage 2	2020 Mar 5 1344	3000	Pacific	137W 46N	Reentry

2018-023C	Falcon 9-051 Stage 2	2020 Oct 16 0910	3000			Reentry
2002-012BS	Falcon 9-095 Stage 2	2020 Oct 30 1401	3000	Nei Moggol	111E 42N	Reentry
2020-074BS	Falcon 9-097 Stage 2	2020 Nov 16	3000	E Pac./Bolivia	79W 14S?	Reentry
2020-087B	CZ-5 Y5 Stage 2	2020 Nov 30 1541	5100	Pacific	135W 4N	Reentry from deep space
2020-033B	Crew Dragon DM-2 Trunk	2020 Dec 11 1359	3000?	Pacific	161W 26S	Reentry
2018-064B	Falcon 9-061 Stage 2	2020 Dec 26 2229	3000	Phillippine Sea	138E 16N	Reentry

For rocket upper stages deorbited soon after launch, the target impact zones are often many degrees in length along the orbit track, so the locations given below should not be taken too seriously. There is some question about the Falcon 9 stage from Sentinel-6, flown on Nov 21. The NOTAM implies a deorbit soon after launch at about 1930 UTC Nov 21 near 112W 41S. but Space-Track cataloged the object, and provided 3 TLE sets with latest epoch Nov 21 2208 UTC and a decay date of Nov 22. This could imply that the deorbit was delayed and occurred with impact possibly near 180E 57S around 0115 UTC Nov 22, or 92W 59S at 0130 UTC. The deorbit of Fregat 112-501 on Sep 28 is also unclear; to match the NOTAMs we must assume the deorbit time was eight hours after the end of satellite deployments.

Table 17: Landings and deorbits, 2020

### 6.3 Retirements in the GEO belt

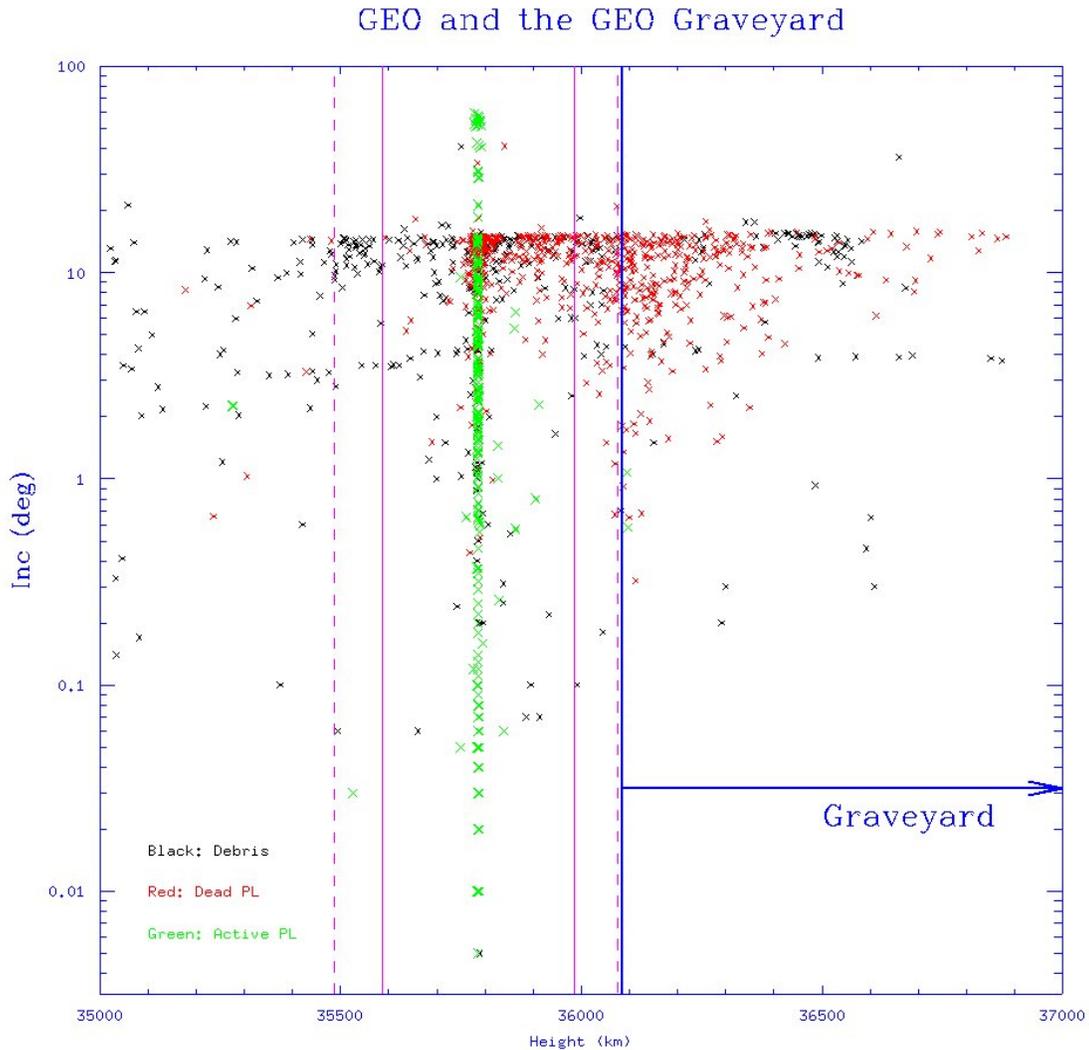

Figure 35: The figure shows log of orbital inclination vs orbital height for objects in the GEO region as of Jan 2021. Eccentricities are neglected. Active satellites (green), dead payloads (red) and debris (black) are indicated. The solid magenta lines are the GEO Protected Zone (GPZ = GEO+/-200 km). Dashed magenta lines are GPZ +/- 100 km (GEO +/- 300 km) used in the results table. Blue line (GEO+300 km) indicates start of the GEO graveyard.

The GEO graveyard is taken to be 300 km or more above GEO (GEO is at 35786 km height.) Counts of objects in various regimes are shown below. The category ‘Below GPZ’ is actually defined to be objects 300 km or more below GEO.

During 2020, 18 satellites were retired from GEO, 1 satellite failed in or near GEO, two debris objects were placed in the graveyard, and two previously existing debris objects were cataloged in the GEO region. The recommended graveyard orbit begins at an altitude of 36086 km, 300 km above GEO.

The table gives perigee and apogee altitude minus the GEO height of 35786 km, and is ordered by

Table 19: GEO Population

	Debris	Dead payloads	Active payloads
Total	429	668	580
Graveyard	92	288	10
GPZ+-100	258	365	566
Below GPZ	79	15	4

perigee. Of the 17 retirements, 12 were raised to orbits fully in the graveyard. The Venezuelan (Chinese-manufactured) Simon Bolivar satellite had its apogee raised to the graveyard but the perigee remained in the GEO belt.

In addition to these, Inmarsat IIF1 was confirmed as of June 2020 to be in active reserve while drifting since Dec 2019, and Ekspress AM-03 raised its orbit somewhat in late 2020 and may be relocating or retired.

In addition, a test flight of the Angara A5 rocket on Dec 14 saw a Briz-M stage with an attached dummy payload enter GEO at 1500 UTC; the Briz-M then restarted two hours later and made two burns to a graveyard orbit.

Table 20: GEO retirements

ID	Satellite	Retired	Height above GEO in Jan 2021 km x km	Notes
2011-048A	Garpun 11L (Kosmos-2473)	2020 Jun 20	-6 x 12	Failed
2008-055A	Simon Bolivar	2020 Mar 20	30 x 536	Still active? Status uncertain
1996-020A	Inmarsat 3F1	2020 Mar 18	60 x 96

2020-097A	GVM/Briz-M 88802	2020 Dec 14	1113 x 1822	Dummy payload
Table 20(b): Near-GEO debris				
2016-004B	IS-29e debris	2019 Apr 7	-1585 x 1380	Note 1
2019-095E	deb Blok DM-03	2019 Dec 24	-971 x -660	Note 1
2020-095B	Delta 385 rocket	2020 Dec 11	Unknown	Secret

Note 1: Cataloged in 2020.

## 6.4 Debris events

There were 4 significant breakups during 2020. The table indicates the number of objects cataloged so far from each, but note that often more objects are cataloged in later years following an event.

Table 21: Breakups and debris events 2020

Date	Object	N cataloged	Orbit km x km x deg	Notes
2020 Jan 9	44421 Kosmos-2535	26	604 x 618 x 97.9	Weapons test?
2020 Feb 12	21656 S5M rocket	111	1187 x 1206 x 82.6	Upper stage
2020 May 8	37756 Fregat SBB	316	422 x 3606 x 51.5	Upper stage tank
2020 Aug 27	23342 Resurs-O1	65	622 x 630 x 97.9	Battery explosion?

In addition, more fragments were cataloged from the earlier breakups of the Kosmos/Iridium collision and the 2007 Chinese ASAT test, as well as from Centaur AV-073 and AV-049 and H-2A F40.

## 7 Acknowledgements

The data presented here are extracted from my satellite and launch database, generated from open source media reports combined with analysis of US Space-Track orbital elements. The analysis has benefited from the opinions of many colleagues, notably Dwayne Day, Brian Weeden, Laura Grego, David Todd, Igor Lissov, Chris Kundstadter, and posters on the forums at [nasaspaceflight.com](http://nasaspaceflight.com).

The author is an employee of the Smithsonian Institution, but the work reported here was performed independently and does not represent the views of the Smithsonian.
